

Planning and Project Management

Objectives of Today's Lecture

- Key issues in planning
- Justifying your DWH
- DWH project plan
- How DWH is different from OLTP project
- Life cycle approach
- Organizing the project team

Few facts

- More than 50 % of DWH projects fail due to..
 1. Lack of experience
 2. Mismanagement
 3. The project is not driven in right way
 4. Requirements are not fulfilled

Planning your DWH

- Before jumping into DWH consider the followings first...
 - Does your company really needs DWH?
 - Is it ready for one?
 - Do we have the right people in our mind for this job?

Planning your DWH Contd..

- Value and expectations
 - Will it provide a better analysis for users?
 - Is it going to improve the bottom line?
 - What are the expectations?
 - Make a list of benefits and expectations
- Risk assessment
 - What is project risk?????
 - Calculate the risks associated with the DWH like..
 - How much money will go in the drain?
 - What are the problems faced by the company if DWH is not implemented
 - What opportunities are likely to be missed

Planning your DWH Contd..

- Top-down or bottom-up
 - Which approach to follow ?
- Build or buy
 - Is the reinventing the wheel good??
 - Do you want to write an in-house programs for data extraction and transformations?
 - Do you need vendor tools completely for information delivery?
 - Buy option can build DWH quickly
 - By Build option you can retain control over functions

Planning your DWH Contd..

- Single vendor or best-of-breed
 - In single vendor we have
 - High level of integration among the tools
 - Constant look and feel
 - Seamless cooperation among components
 - Centrally managed information exchange
 - Over all price negotiable
- Best-of-Breed
 - The advantages are
 - Could build an environment to fit your organization
- Business requirement, not technology

Planning your DWH Contd..

- Top management support
 - The project must have the top management support from right day one
- Justifying your DWH
 - Justify the pros and cons of DWH to be implemented

Over all plan for DWH project

- introduction
- Mission statement
- scope
- Goals and objectives
- Stake holders
- Critical issues
- Success factors
- Project team
- Project schedule
- Deployment details

How it is different form OLTP

DATA ACQUISITION	DATA STORAGE	INFO. DELIVERY
Large number of sources	Storage of large data volumes	Several user types
Many disparate sources	Rapid growth	Queries stretched to limits
Different computing platforms	Need for parallel processing	Multiple query types
Outside sources	Data storage in staging area	Web-enabled
Huge initial load	Multiple index types	Multidimensional analysis
Ongoing data feeds	Several index files	OLAP functionality
Data replication considerations	Storage of newer data types	Metadata management
Difficult data integration	Archival of old data	Interfaces to DSS apps.
Complex data transformations	Compatibility with tools	Feed into Data Mining
Data cleansing	RDBMS & MDDDBMS	Multi-vendor tools

The Life Cycle Approach

DWH Development Phases

- Project plan
- Requirement definitions
- Design
- Construction
- Deployment
- Growth and maintenance

DWH Development Phases

Project team

- Organizing the project team
- Roles and responsibilities
- Skills
- Experience levels

Job titles

Executive Sponsor	Data Provision Specialist
Project Director	Business Analyst
Project Manager.	System Administrator
User Representative Manager	Data Migration Specialist
Data Warehouse Administrator	Data Grooming Specialist
Organizational Change Manager	Data Mart Leader
Database Administrator	Infrastructure Specialist
Metadata Manager	Power User
Business Requirements Analyst	Training Leader
Data Warehouse Architect	Technical Writer
Data Acquisition Developer	Tools Specialist
Data Access Developer	Vendor Relations Specialist
Data Quality Analyst	Web Master
Data Warehouse Tester	Data Modeler
Maintenance Developer	Security Architect

roles

Executive Sponsor

Direction, support, arbitration.

Project Manager

Assignments, monitoring, control.

User Liaison Manager

Coordination with user groups.

Lead Architect

Architecture design.

Infrastructure Specialist

Infrastructure design/construction.

Business Analyst

Requirements definition.

Data Modeler

Relational and dimensional modeling.

Data Warehouse Administrator

DBA functions.

Data Transformation Specialist

Data extraction, integration, transformation.

Quality Assurance Analyst

Quality control for warehouse data.

Testing Coordinator

Program, system, tools testing.

End-User Applications Specialist

Confirmation of data meanings/relationships.

Development Programmer

In-house programs and scripts.

Lead Trainer

Coordination of User and Team training.

Experience levels

Executive Sponsor

Senior level executive, in-depth knowledge of the business, enthusiasm and ability to moderate and arbitrate as necessary.

Project Manager

People skills, project management experience, business and user oriented, ability to be practical and effective.

User Liaison Manager

People skills, respected in user community, organization skills, team player, knowledge of systems from user viewpoint.

Lead Architect

Analytical skills, ability to see the big picture, expertise in interfaces, knowledge of data warehouse concepts.

Infrastructure Specialist

Specialist in hardware, operating systems, computing platforms, experience as operations staff.

Business Analyst

Analytical skills, ability to interact with users, sufficient industry experience as analyst.

Data Modeler

Expertise in relational and dimensional modeling with case tools, experience as data analyst.

Data Warehouse Administrator

Expert in physical database design and implementation, experience as relational DBA, MDDBMS experience a plus.

Data Transformation Specialist

Knowledge of data structures, in-depth knowledge of source systems, experience as analyst.

Quality Assurance Analyst

Knowledge of data quality techniques, knowledge of source systems data, experience as analyst.

Testing Coordinator

Familiarity with testing methods and standards, use of testing tools, knowledge of some data warehouse information delivery tools, experience as programmer/analyst.

End-User Applications Specialist

In-depth knowledge of source applications.

Development Programmer

Programming and analysis skills, experience as programmer in selected language and DBMS.

Lead Trainer

Training skills, experience in IT/User training, coordination and organization skills.

Thank You Very Much
